

HOW IT WORKS

From list to voicemail to *live deal.*

A plain-English walkthrough of what happens from the moment the system wakes up each morning to the moment your closer is on the phone with a dental practice.

01 · The Daily Routine

02 · On Every Call

03 · What You See

3

The system does the *legwork*.

6:00 AM

Reads your HubSpot list

The system logs into HubSpot and pulls today's call list. You control exactly who's on it — the system dials whoever you've queued up.

1

6:05 AM

Plans around time zones

A practice in Dallas gets called during Dallas business hours. A practice in LA during LA hours. Each contact gets two attempts — one mid-morning, one mid-afternoon.

2

All Day

Dials in the background

As each local mid-morning hits, calls go out automatically. No one needs to be at a desk. Every outcome is logged the moment it happens.

3

WITHOUT THIS SYSTEM

- One person manually dialing, all morning
- Manually logging each call in HubSpot
- No visibility unless you ask for an update
- Every voicemail sounds slightly different
- Zero follow-up text unless someone sends it

WITH THIS SYSTEM

- ✓ Calls go out automatically across all time zones
- ✓ Every outcome logged in HubSpot and the dashboard
- ✓ Real-time visibility without asking anyone
- ✓ Same polished, human-recorded message every time
- ✓ SMS follows every voicemail, automatically

02 • ON EVERY CALL

Four things can happen. The system *handles all of them.*

✓ BEST CASE

Voicemail picks up

The system detects a voicemail box and plays your pre-recorded message in full — the same human voice, every time, exactly as rehearsed.

THEN AUTOMATICALLY →

An SMS is sent to the same number within seconds: a short follow-up message reinforcing the voicemail and asking them to call back. HubSpot is updated. The dashboard logs it. Nothing else required.

★ BEST OPPORTUNITY

A human picks up

Instead of an awkward robocall, the system plays a short hold message — and simultaneously rings your entire team at once.

THEN AUTOMATICALLY →

"Please hold..."

Rings 5 closers

First to answer gets the call

Everyone else is released. If nobody answers within 20 seconds, a courteous message plays and the call ends cleanly.

NO ANSWER

Nobody picks up

The phone rang out — no voicemail box detected. Usually happens when a practice uses call screening.

THEN →

Logged as "No Answer" in the dashboard and HubSpot. No SMS sent.
The afternoon attempt still runs as scheduled.

EDGE CASE

Something went wrong

Bad number, disconnected line, carrier issue. Rare, but it happens. The system catches it cleanly without leaving a partial message.

THEN →

Logged with an error code so your team can spot and clean bad numbers in bulk. No SMS. No HubSpot engagement created.

03 • WHAT YOU SEE

One dashboard. One *source of truth*.
